

Post-Op Note (Blank Template)

January 1, 2050

This is the note done as soon as the patient leaves the OR and is in PACU. This is supposed to be a brief summary in order for the nurses and rest of the team can see what recently took place. Sort of like a checkpoint status. A much longer version of this is dictated later when the time is allowed called a "Dictation" or "Operation Report Detail". Follow the Acronym... SAPPA HEMI SCC
